PROFILE

Versatile and Solution-Oriented Frontend Developer: Crafting Intuitive User Experiences with Modern Technologies and Agile Methodologies

---

WORK EXPERIENCE

FrontEnd Developer

Freelance, Remote   2022 - Present

- Delved into legacy codebases, enhancing functionality and scalability to meet evolving business requirements.
- Leveraged AWS Amplify, API Gateway, and Lambda for secure and scalable application hosting.
- Utilized ReactJS for crafting responsive and interactive frontend designs, improving user engagement.
- Deployed Jest for rigorous unit and functional testing, assuring software reliability and quality.
- Employed Webpack and Babel as efficient bundling tools, optimizing code delivery and performance.
- Engaged in productive collaborations with in-house teams and fellow freelancers, ensuring timely delivery of feature sets.
- Built robust servers using Node.js with Express middleware, facilitating efficient request handling and backend operations.

Software Engineer II

Roberts Communication Network, Las Vegas   2021-2022

- Engineered an in-house Electronic Program Guide (EPG) application to streamline satellite programming, utilizing ReactJS, Jest, Docker, and Bootstrap for efficient development.
- Conceptualized and constructed user interface from the ground up with Figma and Concepts applications, ensuring an intuitive and user-friendly experience.
- Collaborated closely with company stakeholders, adjusting designs and features as necessary to meet user needs and business objectives.
- Thrived in an Agile work environment, contributing to iterative development and continuous improvement.
- Validated the integrity of data processed from backend APIs, ensuring seamless functionality and user experience
- Undertook the reformatting of legacy company data, enhancing data quality and usability.

FrontEnd Developer

Code Legion, Las Vegas   2020-2021

- Pioneered a comprehensive four-month curriculum covering frontend, backend, and DevOps, using Figma for interactive and engaging content delivery
- Conceptualized and executed a student portal with ReactJS, providing students with real-time metrics and personalized data.
- Held multifaceted roles in this startup environment, including software architecture and technology stack determination, demonstrating versatility and broad technical expertise.
- Leveraged Docker for cloud-agnostic application deployment, ensuring scalability and easy maintainability.
