Edward Plasencio

Software Engineer

St. Thomas, USVI | (915) 867-1023 | edward.plasencio@gmail.com | www.eddwordd.com

SUMMARY:

Software Engineer specializing in AI platforms, automation systems, and microservice connected applications. Experienced across React and Svelte ecosystems building internal tooling, analytics infrastructure, and scalable product interfaces.

SKILLS:

- Frontend - React, Next.js, Svelte, TypeScript, Tailwind, shadcn/ui, Framer Motion, SvelteFlow
- Backend & Data - Node.js, Supabase, PostgreSQL, Edge Functions, MySQL, REST APIs
- Automation - n8n, Pipedream, Webhooks, API orchestration
- AI & Payments - OpenAI API, Stripe
- Observability -Sentry, PostHog, Clerk, RBAC
- DevOps - Docker, GitHub Actions, AWS, CI/CD
- Desktop - Electron

LANGUAGE:

- English
- Spanish

EXPERIENCE:

SOFTWARE ENGINEER **2025 - PRESENT**

MonaTech LLC

- Engineered a demo management platform supporting product showcasing and sales workflows.
- Developed event-driven automation pipelines using n8n and Pipedream, integrating APIs, webhooks, and third-party services.
- Designed Supabase (PostgreSQL) database schemas to capture and secure company performance metrics.
- Built a real-time admin platform enabling instant product uploads and live deployment updates.
- Automated operational processes, reducing manual workload through centralized tooling.

SOFTWARE ENGINEER **2024- 2025**

Bloombox AI

- Contribute to AI platform development within a microservices architecture.
- Develop modular interfaces using Svelte, Tailwind CSS, and TypeScript.
- Implement AI workflows visually using SvelteFlow node-based interaction systems.
- Integrate frontend applications with distributed REST services.
- Built workspace file-management tooling using Supabase.
- Improved performance through profiling and request optimization.

SOFTWARE ENGINEER II **2021- 2023**

Roberts Communication Network

- Designed a high-availability Electronic Program Guide (EPG) platform supporting content scheduling and subscriber access.
- Developed customizable white label applications for subscription partners.
- Implemented API integrations to synchronize metadata, scheduling, and subscriber systems.
- Led legacy data migration initiatives, restructuring datasets for modern platforms.
- Optimized backend request handling using parallel processing techniques.
- Improved system stability through production debugging, monitoring, and performance tuning.
